Tortoriello Richard : Quantitative Strategies for Achieving Alpha: The Standard and Poor's Approach to Testing Your Investment Choices (McGraw-Hill Finance Investing) before purchasing it in order to gage whether or not it would be worth my time, and all praised Quantitative Strategies for Achieving Alpha: The Standard and Poor's Approach to Testing Your Investment Choices (McGraw-Hill Finance Investing):

4 of 5 people found the following review helpful. Money MakerBy Raw DogIf you are a more advanced investor and you have been trying to figure out how to find the keys to profitability, this book will get you several steps closer to finding yourself at the top tier of money making. The screening techniques and combinations are spot on and you even

gain insight into the best shorting strategies. A must have in your library. 14 of 17 people found the following review helpful. Best book yet on Mechanical Investing By Mark S First, let me say that I don't know if mechanical investing works. I am just starting to use it. I do more modern portfolio investing, and Warren Buffet moat style investing. That being said, I have read the following books on Mechanical investing. What Works on Wall St., Screening the Market, Investment Fables, Your Next great stock, and The Future for Investors. This is the best book on Mechanical Investing. One thing to keep in mind. Free screening software won't let you get the most out of this book. You need something like aii's stock investor pro, for 200.00 per year, to maximize the results from this book. Here is an update to this review. It is a very well written book. That being said, having tried mechanical investing, it does not work in practice. For many reasons, things that do well in backtest, do not do as well going forward. 0 of 1 people found the following review helpful. Five Stars By Customer Get before set schedule. Appreciate it.

Alpha, higher-than-expected returns generated by an investment strategy, is the holy grail of the investment world. Achieve alpha, and you've beaten the market on a risk-adjusted basis. Quantitative Strategies for Achieving Alpha was borne from equity analyst Richard Tortoriello's efforts to create a series of quantitative stock selection models for his company, Standard Poor's, and produce a "road map" of the market from a quantitative point of view. With this practical guide, you will gain an effective instrument that can be used to improve your investment process, whether you invest qualitatively, quantitatively, or seek to combine both. Each alpha-achieving strategy has been extensively back-tested using Standard Poor's Compustat Point in Time database and has proven to deliver alpha over the long term. Quantitative Strategies for Achieving Alpha presents a wide variety of individual and combined investment strategies that consistently predict above-market returns. The result is a comprehensive investment mosaic that illustrates clearly those qualities and characteristics that make an investment attractive or unattractive. This valuable work contains: A wide variety of investment strategies built around the seven basics that drive future stock market returns: profitability, valuation, cash flow generation, growth, capital allocation, price momentum, and red flags (risk) A building-block approach to quantitative analysis based on 42 single-factor and nearly 70 two- and three-factor backtests, which show the investor how to effectively combine individual factors into robust investment screens and models More than 20 proven investment screens for generating winning investment ideas Suggestions for using quantitative strategies to manage risk and for structuring your own quantitative portfolios Advice on using quantitative principles to do qualitative investment research, including sample spreadsheets This powerful, data intensive book will help you clearly see what empirically drives the market, while providing the tools to make more profitable investment decisions based on that knowledge--through both bull and bear markets.

About the Author Richard Tortoriello is the aerospace and defense analyst in the equity research division of Standard Poor's and has also conducted numerous quantitative investment studies for the company. He is responsible for buy, sell, and hold recommendations on twenty-five aerospace- and defense-related stocks, including General Electric, Boeing, United Technologies, Lockheed Martin, and Honeywell. He has been interviewed numerous times for Bloomberg Television, CNBC, BBC TV, CNN, The Wall Street Journal, The New York Times, and The Washington Post.
