Perfect alternative to refresher course in algebra/mathematics By VISHAL G GATHANI Really good book for someone who took college-level Calculus few years ago but need to brush up on the concepts for job interviews, preparation for graduate school or for fun. What makes this book so informative is its easy-to-follow format allowing the reader to ease into the more complex concepts of mathematical

methods. For example, it starts with very basic concepts of calculus (i.e. differential calculus, optimization problems etc.) and ends with advanced theoretical concepts such as multi-variable calculus. Similarly, it begins with basic level of algebra and ends with intermediate linear algebra. Assuming that you have the discipline of studying periodically, this book is the best alternative to taking a refresher course in college-level algebra/mathematics. 0 of 0 people found the following review helpful. Five Stars By Ethan Moore Excellent 1 of 1 people found the following review helpful. well written and easy to follow content By PA_O's_Fan I had to purchase this book for a grad school class that I was taking. The book is well written, provides easy to follow examples, and contains many test problems that can be solved to practice the skills you have learned.

Confused by the math of business and economics? Problem solved. Schaum's Outline of Mathematical Methods for Business and Economics reviews the mathematical tools, topics, and techniques essential for success in business and economics today. The theory and solved problem format of each chapter provides concise explanations illustrated by examples, plus numerous problems with fully worked-out solutions. And you don't have to know advanced math beyond what you learned high school. The pedagogy enables you to progress at your own pace and adapt the book to your own needs.

From the Back Cover About the Author Edward T. Dowling (Bronx, NY) is a professor of economics at Fordham University and currently serving his second term as the chairman of the department. He was the chairman of the economics department from 1979 to 1982 and the dean of Fordham College from 1982 to 1986. His Ph.D. is from Cornell University, and his main areas of professional interest are mathematical economics and economic development. In addition to articles, he is the author of Schaum's Outline of Introduction to Mathematical Economics, Second Edition. He is also a Jesuit priest and a member of the Jesuit Community at Fordham.
